

Viscose is a kind of fiber extracted from pure plant wood pulp commonly used in spunlace non-woven fabrics.

The viscose spunlace non-woven fabric is as soft as the cotton non-woven fabric and has a very good hand feeling.

Moreover, the hygroscopicity and air permeability of viscose spunlace cloth are very good, even better than cotton non-woven fabrics.

The strength of viscose non-woven fabric is very high, and it is not easy to fluff.

Due to the advantages of spunlace, it has become a field with the fastest technological progress in the nonwoven industry in recent years.

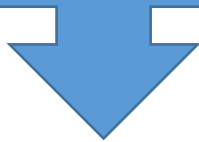

The development direction of non-woven fabrics is to replace textiles and knitted fabrics. Spunlace fabrics have become the most potential field to compete with the textile market because of their most similar characteristics to textiles, excellent physical properties, and the advantages of cheap and beautiful.
